

“Grab This Little Known Tool To Get Maximum Results From Your Email Marketing – Obliterating All Barriers To Your Campaign And Reeling In The Cash!”

Dear Entrepreneur,

Do you grind your teeth with frustration when you get messages that your email sales letter has bounced?

Are you depressed and tired of spending loads of time unraveling blacklisting issues?

Have you ever been embarrassed by an expensive email campaign that had poor results?

Let's face it, if you don't have a high-octane email marketing campaign, then you really can't expect to do much business online. If you are using email, you can bet there will be barriers in the way to your undertaking.

The Death of a Business

George made a big mistake. Several days ago, he purchased an email list from a "reputable" seller. He was told that this list was verified and that it was targeted specifically to his market. He paid over \$1000 for the list, and because the fee was rather large, he thought it was high quality, and very focused.

No sooner had he started using the list in his sales campaign, George got a rather distressing notification; **he was being banned by his Internet Service Provider (ISP) because his email had been caught by a spamtrap.** Because the spamtrap was a fake email address used by a verification company, he was reported to his ISP.

Now, George's campaign was dead in the water. *Not only that, he was out \$1000 on a bogus email list!*

George's story isn't unique, it happens to thousands of email marketers yearly. Not only that, email marketers encounter many other problems such as email bounces, duplicates and in severe cases, blacklisting.

The bottom line – if you are a serious online marketer, you have to take every precaution to protect your campaigns and reputation.
